## **DETAILED ACTION**

### **Status of claims**

1. Claims 1-2, 4-5, 7-16 has been deleted and claims 3,6, 17-23 are pending.

### ***Allowable Subject Matter***

2. Claims 3,6,17-23 are allowed. The following is an examiner's statement of reasons for allowance: the prior art of record (Kennedy'252) teaches performing ambiguity function processing using known data sequences in the signal and the signal received at the another wireless location sensor (see column 1,lines 54-column 2, line15) in which LMU "WLS" locates the mobile station 110 at an ambiguity area by measuring Abis and control and sequence of data received from MS110 and (WLS or LMU) LMUs are configurable and switchable to measure attributes of the transmitted signal from mobile station belonging to any of the wireless carries and estimates the location of the mobile station using time of arrival, time difference of arrival, angle of arrival signal power and combination of the same (abstract) in which transmitted signals from mobile station measured using time of arrival (TOA), time difference of arrival (TA), angle of arrival (AOA) and combination to locate mobile station at unknown area by sharing such measurements from mobile appliance. Kennedy teaches measuring an attribute of the signal at the another wireless location sensor ( see column 7, lines 44-51) in which measure attributes shared with other LMU (WLS) see fig.2 251 and fig. 3 item 350). Kennedy teaches estimating the location of the mobile appliance based at least in

part by measured attribute (see abstract the location of the LMU are configured to provide an acceptable level of location accuracy and (see column 1 ,lines 54-column 2, line15) in which LMU "WLS" locates the mobile station 110 at an ambiguity area by measuring Abis and control and sequence of data received from MS110).

The current application teaches (d) performing pattern matching to compare sets of measurement data with sets of predetermined data; (e) performing pseudo-range measurements from timing signals transmitted in radio frequency ("RF") bands from a forward link transmission, where the RF bands are not the same as the signal; using differential Doppler techniques and fading envelope detection techniques enabling known roadways to be used as surfaces of position for location; and estimating the location of the mobile appliance based at least in part on one or more of steps (a) through (f). these limitation, in conjunction with all other limitations, has not been disclosed , taught or made obvious over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
